## Calendar and E-mail Reminder System

Critical dates are managed through the Compliance Calendar and the E-mail Reminder system. The calendar system can be associated with dates on any of the forms and any field such as a lease expiry date or a permit renewal date. For example, when adding a new permit into the system, the system ensures that the user sets up a calendar item for the renewal date of the permit. In addition, an e-mail reminder will automatically be set up to send an e-mail reminder at a preset interval before that renewal date.

This module provides an input source for all tasks to be undertaken at your properties and facilities, the person(s) assigned to the task and the time required for completion. The user is able to view their activities as well as all activities for that facility by each week, month or year with an Internet connection.

Using the E-mail Reminders Module, organizations can create a system of e-mail delivered notifications that help prevent oversights. E-mail Reminders notify the appropriate staff of upcoming deadlines, and they help organizations establish a documented path of responsibility.
