

ENKON Information Systems

ENKON was incorporated in 1996 and has built, deployed and managed Information Management Systems since that time for clients across North America and in Australia. **ENKON** has offices in Victoria and Vancouver, B.C. as well as Seattle, Washington, USA. **ENKON** has developed a reputation for being client focused, innovative and responsive to change. **ENKON's** working relationship with many clients extends back to the company's inception in 1996, and these relationships will extend many years into the future. This reflects **ENKON's** dedication to solving and managing clients' problems and requirements.

ENKON is a technology driven company and is constantly looking for opportunities to extend its portfolio of custom designed information management systems. **ENKON's** greatest success so far has been in the areas of property and environmental management using our flagship product **EnviroLIS**.

EnviroLIS is a web-based information management tool which has evolved over the last seven years and has been deployed for a wide range of clients. **EnviroLIS** manages property, facility and environmental information, as well as all their related data, addressing permits, contracts, agreements, assets and other business processes.

EnviroLIS's data management forms, calendars, automated e-mail, report generators, multimedia management and storage, and multi-tiered navigation can manage and empower information access for users with all levels of technical experience. Products are well supported and designed to be both accessible to registered users and yet secure from unwanted access.

EnviroLIS is a collaborative, web-based information management system, requiring only Microsoft's Internet Explorer on the users' computers to access a powerful information management tool. Tabular data are managed through the Forms and Reports modules, and all multimedia can be handled through the Photo and Document Management modules. The system is also completely modular so that the client only pays for the functionality that matches its needs.
